IT SECURITY PENETRATION TESTER

(full time job)

Ideal candidate needs to have:

- Experience with vulnerability and penetration testing techniques and tools
- Knowledge of security testing tools including Metasploit, Nmap, Nessus, Burp Suite, Core Impact, Canvas, or other exploitation frameworks
- Familiarity with Linux, Windows and Mac OS
- Knowledge of mobile application security testing
- Knowledge of wireless technologies
- Knowledge of web application technologies
- Approach to problems in a different way than “normal” Network Admins, Systems Admins and DBAs
- Perform full cycle engagements of penetration testing on business units independently, or as part of a team
- Configure, run and monitor automated security testing tools
- Perform manual validation of vulnerabilities, penetration testing of client systems, web sites and networks to discover vulnerabilities
- Team spirit, but also ability to work independently
- Good communication skills, flexibility and problem solving
- Self-motivated and ability to learn from professional literature
- Ability to present information concisely and identify key issues clearly
- Analytical skills and creativity and innovative attitude
- Fluency in English

Desirable skills:

- University degree in Computer Science or IT module, or equivalent work experience
- OSCP, Certified Ethical Hacker (CEH), GPEN, GSEC, CISSP, CASP, CISA or LPT Certification
- Programming experience in JavaScript, Python, PHP, Perl, Ruby, Java, C/C++, .NET or other interpreted or compiled languages
- A good understanding of networking, networking protocols and network troubleshooting including TCP/IP, routing, subnetting, TCP vs. UDP
- Social engineering
- Hardware hacking

Responsibilities:

As well, the IT security penetration tester will be expected to work on complete technical security assessments and perform a comprehensive range of information security testing services and activities. IT security penetration tester will work under demanding deadlines and often handles heavy workloads, operating with general and sometimes limited supervision. This role includes performing the full cycle of penetration testing engagements - from scoping, through threat modeling, information gathering, discovery, vulnerability assessment, active testing, pivoting and reporting, including internal, external, web, mobile, thick applications and additional environments.

Offer:

- Competitive salary
- Full time job, paid vacation, performance based bonuses
- International projects
- Social and health insurance taken care of
- Professional learning and ability for certification
- Team work, good organizational behavior, knowledgeable and reliable management
- Friendly and relaxed atmosphere
- Fully stocked kitchen, good catering
- A-class office building in quiet residential part of Belgrade, with private park and nice view
- Small teams and individual offices

Location:

Serbia, Belgrade, Kronštatska 5
(with option to travel for professional courses)
